SALES PERFORMANCE DASHBOARD

Project Report — Data Analysis Internship

Submitted by:

TEJAS RAVINDRA MANE

Internship Organization: Syntecxhub

Domain: Data Analysis | Mode: Remote | Duration: 1 Month

Start Date: 23 September 2026

1. Introduction

This report presents the Sales Performance Dashboard project completed during a one-month Data Analysis internship with Syntecxhub, conducted in remote mode. The project involved cleaning a sales dataset in Microsoft Excel and building an interactive dashboard in Microsoft Power BI to analyze revenue, profit, orders and sales trends.

2. Project Objective

The objective of this project was to analyze sales data and build an interactive dashboard to help users understand:

- Overall revenue, profit, number of orders and quantity sold
- Sales trends over time
- Sales and profit by category and region
- Top-selling and most profitable products

The dashboard also includes filters (slicers) for interactive analysis by date, region and category.

3. Tools Used

This project was built entirely using Microsoft Office and Microsoft Power BI, without any programming, database or machine learning tools.

- Microsoft Excel — used for data cleaning and preparation
- Microsoft Power BI — used for building the interactive dashboard

Excel was used to inspect the raw data, remove errors, and produce a clean file suitable for analysis. Power BI was then used to turn that clean file into a visual, interactive dashboard.

4. Dataset Used

Two Excel files were used in this project: Sales_Data_Raw.xlsx (the original dataset) and Sales_Data_Cleaned.xlsx (the cleaned dataset used for the dashboard).

Detail	Value
Raw Dataset Rows	2,225
Cleaned Dataset Rows	2,182
Columns	Order ID, Order Date, Product, Category, Region, Quantity, Sales, Profit
Date Range	01 January 2022 to 31 December 2024
Categories	Electronics, Furniture, Accessories, Office Supplies
Regions	North, South, East, West
Sales Range	Approximately ₹138.73 to ₹80,342.09

5. Data Cleaning Done in Excel

The raw dataset was cleaned in Excel before it was used in Power BI. The following steps were performed:

- Removed duplicate Order ID entries
- Removed rows with missing/null values
- Formatted Order Date as a proper Excel date
- Validated Quantity, Sales and Profit as numeric fields

After cleaning, the dataset was reduced from 2,225 rows to 2,182 rows and saved as Sales_Data_Cleaned.xlsx.

6. Power BI Dashboard — What Was Built

The cleaned dataset was imported into Power BI and used to build a single-page dashboard titled "SALES PERFORMANCE DASHBOARD", using a clean, corporate style with a white background and blue charts. No advanced DAX, Date Table, or complex relationships were used — all visuals use direct fields with Sum or Count aggregations.

KPI Cards

- Total Revenue — Sum of Sales
- Total Profit — Sum of Profit
- Total Orders — Count of Order ID
- Total Quantity — Sum of Quantity

Filters (Slicers)

- Order Date — filters the dashboard by date
- Region — filters the dashboard by North/South/East/West
- Category — filters the dashboard by product category

Charts

- Sales Trend Over Time — Line chart (Order Date vs. Sum of Sales)
- Sales by Category — Clustered column chart (Category vs. Sum of Sales)
- Sales by Region — Clustered bar chart (Region vs. Sum of Sales)
- Profit by Category — Clustered column chart (Category vs. Sum of Profit)
- Top Products by Sales — Bar chart, Top 10 products by Sum of Sales
- Product Profit Performance — Bar chart (Product vs. Sum of Profit)
- Category Sales by Region — Ribbon chart (Category, Region, Sum of Sales)

7. Key Insights

- Sales increased from 2022 to 2024, with 2024 recording the highest yearly sales (₹40.6 Lakhs in 2022, ₹44.0 Lakhs in 2023, ₹57.7 Lakhs in 2024, approximately).
- Furniture recorded the highest category-level sales, followed by Electronics.
- Office Supplies had the lowest category-level sales.
- North region recorded the highest sales among the four regions (North > South > East > West).
- The dashboard's filters allow sales and profit to be compared interactively across time, category and region.

8. Challenges Faced

- Cleaning raw data and removing duplicate records
- Handling missing values
- Formatting the Order Date column correctly
- Choosing suitable visuals and aggregations in Power BI

9. Learning Outcomes

This project helped build practical skills in Excel data cleaning, Power BI dashboard creation, KPI design, data aggregation (Sum/Count), use of interactive slicers, and business-oriented sales and profit analysis.

10. Conclusion

This project provided hands-on experience in cleaning sales data in Microsoft Excel and building an interactive Sales Performance Dashboard in Microsoft Power BI. The dashboard successfully presents revenue, profit, order and quantity KPIs along with category, region and product-level analysis, supported by interactive filters. Key findings show rising sales from 2022 to 2024, with Furniture and Electronics as leading categories and North as the top-performing region.
